

Agro Stubble Management Pvt Ltd.

**“SAVE EARTH
FOR FUTURE”**

Stop Stubble Burning

www.agrostubblemanagement.com

we are at sampling stage startup and our company has been formed to utilise agro stubble by manufacturing products out of it. once we are able to utilise the same then no one is going to burn it especially rice stubble.

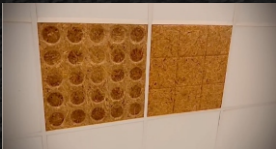

ABOUT COMPANY

The aim of our company is to find appropriate solutions to reduce agro pollution which is a major threat to the environment these days. In the beginning we will work on rice stubble utilisation and management and afterwards we will work on plastic menace which is the major source of pollution now a days and will work to reduce the loads on dumping grounds.

MISSION

Every big industry in the world is eager to reduce the pollution level but they need eco friendly substitutes for packing their products. Today they are using only corrugated boards and plastic bags for packing their products but we will give them the third option which will be pollution free and eco-friendly hence they will definitely support us to make this happen. Lots of companies and government sectors are trying to create a reliable solution to reduce farm fire and we are one who are working on it. About 500 million tons of rice stubble is produced annually in our country in which 20 million tons of rice stubble is produced every year in the state of Punjab alone which can be used as raw material and run the factories that eventually increase employment and pollution free environment.

PRODUCTS FROM RICE STUBBLE

DROP DOWN CEILING TILES

USED FOR ROOF CEILING.

SPECIFICATIONS

SIZE | 595mm x 595mm

THICKNESS | 12MM

PACKING TRAY

CAN BE USED FOR GIFT PACKING

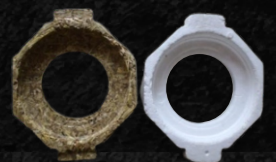

SPECIFICATIONS

SIZE | 300 mm X 600 mm

DEPTH | 24 MM
